Cannabis pharmaceuticals refers to the development and sale of pharmaceutical drugs or medicines with compounds of cannabis plants acting as key components. The plant belongs to the Cannabaceae family of flowering plants and produces a highly popular psychoactive drug called marijuana or cannabis. The plant is indigenous to South and Central Asia. It is widely used as a recreational drug. However, in recent times, the pharmaceutical industry has invested heavily in exploring the plant and its components for their medicinal attributes. Two of the most well-researched and popular components are cannabidiol (CBD) and tetrahydrocannabinol (THC) since they are known to exhibit several therapeutic effects. Cannabis pharmaceuticals deal with exploring a combination of cannabinoids and studying their impact on diseases or health conditions under a controlled environment and in the guidance of a licensed supervisor such as a medical practitioner. Medicines produced using cannabis are available in several forms including sprays, capsules, and tablets. The medicines cannot be rolled out in the commercial market without receiving necessary approvals from regulatory bodies.
