Cannulated Compression Headless Screws are specialized screws used in orthopedic surgeries that feature a hollow design and compression capabilities. These screws are usually made of titanium alloy or bioabsorbable materials and have a hollow lumen through which guide pins or other auxiliary instruments can be introduced. It is designed to achieve compression fixation of the fractured end or severed bone end by screwing into the bone, thereby promoting fracture healing or bone severed healing. These screws are typically headless in design to reduce soft tissue irritation and provide lower surface protrusion. Cannulated Compression Headless Screws are widely used in orthopedic surgery to treat fractures, joint fusions, bone amputations, and other orthopedic conditions or injuries.
