The cantilever single twisting machine is a core equipment dedicated to the twisting process of cables, optical cables, wire ropes and other wires. Its design features a single-side cantilever support structure with a winch or twisting cage installed at the end of the cantilever. Through the rotation and traction system, multiple single wires are twisted into a composite wire according to a specific pitch and direction. The equipment has high-precision twisting control, modular reel change design and automatic tension adjustment functions. It is suitable for the efficient production of small and medium-sized cables, especially in the field of flexible cables and precision stranded wires. Key technologies include servo synchronous drive, anti-kink guide system and intelligent preforming device, which can reduce stress concentration and improve twisting uniformity.
