The global Cantilever Waterjet Cutting Machine market size is predicted to grow from US\$ 193 million in 2025 to US\$ 258 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The driving factors for the use of a cantilever waterjet cutting machine include:

- 1. Flexibility in material handling:** A cantilever waterjet cutting machine features a gantry system with a single, extended arm that allows for easy loading and unloading of materials. This flexibility in material handling enables the cutting of large or heavy materials with ease, making it suitable for a variety of applications.
- 2. Versatility in cutting capabilities:** Cantilever waterjet cutting machines can cut through a wide range of materials, including metals, composites, plastics, stone, glass, and more. This versatility makes it suitable for diverse industries such as aerospace, automotive, architecture, and signage.
- 3. Precision and accuracy:** Waterjet cutting technology is known for its precision and accuracy. The combination of high-pressure water and abrasive materials allows for clean and precise cuts, reducing the need for secondary operations or finishing.
- 4. Non-thermal cutting process:** Cantilever waterjet cutting machines employ a non-thermal cutting process, which eliminates potential heat-related distortion or damage to

the material being cut. This makes it suitable for heat-sensitive materials and ensures consistent quality in the final product.

5. Minimal material waste: Cantilever waterjet cutting machines utilize a narrow cutting stream, which allows for tight nesting of parts and maximum material utilization. This minimizes material waste and contributes to overall cost savings.

6. Efficiency and productivity: Cantilever waterjet cutting machines are designed for high-speed cutting, resulting in increased productivity and efficiency. The ability to switch between different materials and cutting designs quickly also contributes to time savings and higher production throughput.

7. Safety features and operator comfort: Cantilever waterjet cutting machines typically come equipped with safety features such as protective enclosures, safety interlocks, and emergency stop buttons. Additionally, the ergonomic design of the machine ensures operator comfort and reduces the risk of operator fatigue or injuries.

8. Cost-effective for various production volumes: Cantilever waterjet cutting machines are suitable for both small-scale and large-scale production. They offer cost-effective solutions for one-off custom jobs as well as high-volume production runs, eliminating the need for specialized tooling or molds.

Overall, the driving factors for the use of a cantilever waterjet cutting machine include its flexibility in material handling, versatility in cutting capabilities, precision and accuracy, non-thermal cutting process, minimal material waste, efficiency and productivity, safety features, and cost-effectiveness for various production volumes.
