Cap button stapler is a special pneumatic or manual tool that combines nails and plastic caps to shoot into the surface of materials at the same time. It is mainly used for the fixing construction of easily torn materials such as roof waterproofing membranes, building windbreaks, vapor barrier membranes, insulation layers or ground membranes. This tool expands the force-bearing area by driving the round plastic cap and nails into the base layer as a whole, preventing the material from being torn under wind pressure or tension, and effectively improving the fixing strength and weather resistance. Compared with traditional nail guns, cap button nail guns have the advantages of fast operation, firm fixation, and excellent waterproof performance. They are important auxiliary equipment in the installation of building protective layers and are widely used in housing construction, temporary construction projects, agricultural covering and other fields.
