Cap stapler is a pneumatic tool specially used to drive nails and plastic caps (caps) into the surface of the substrate at the same time. It is mainly used to fix building protective materials, such as roofing underlayment, house wrap, windproof and moisture-proof cloth, etc. Its working principle is to automatically press in a plastic cap while injecting the U-shaped nail, effectively expanding the force-bearing area, preventing the material from tearing or falling off, and improving the wind resistance and waterproof performance. Cap nail guns are generally pneumatically driven, with rolled plastic caps and nail strips. They are easy to operate, fast to nail, and have excellent protective performance. They are widely used in construction and roofing.
