The kick sensor is a capacitive sensor that detects the change in capacitance caused by kicking. It is used to open the trunk or sliding door comfortably by kicking it without touching the body or using your hands. You can easily open the trunk or sliding door without pressing the RKE button or switch. When the effective remote control is in the rear safety detection area, kick the foot under the FMS. After the FMS detects the kicking action, the OC terminal outputs a pulse signal to the BCM.
