Capacitive Proximity Sensors used for measuring an object's position, displacement, or proximity are commonly employed in a range of manufacturing plant control applications. They can be applied for inspecting and monitoring products and tools, controlling machine systems, and positioning moving parts. Proximity sensors, which measure displacement and angular or linear motion, are also frequently used as safety sensors and for setting operational controls in molding, packaging, printing, and the food and chemical processing fields. These devices are able to detect and track an object's nearness to a predetermined boundary without physically touching the object.
