The report requires updating with new data and is sent in 48 hours after order is placed.

Capacitively coupled plasma etcher is CCP using capacitive coupling to generate plasma, this plasma density is lower but higher energy, suitable for etching harder dielectric materials such as oxides, nitrogen oxides and masks etc. In the integrated circuit structure there is an underlying device and an upper line, the underlying device has only one layer while the upper line has dozens of layers, the capacitive coupled etcher belongs to the upper line etching work.
