Capillary tube is a ceramic tool used in wire bonding technology to bond wires to bonding pads. The capillary tube is clamped in the sensor of the wire bonding machine. Each capillary tube has a tool life that must be monitored. Regular cleaning is also necessary, and the cleaning interval is determined based on the number of times the capillary tube touches the ground. The most advanced wire bonding machine is also equipped with an automatic suppression system, which can alert users in advance when the tool is about to reach its service life. The bonding quality is greatly affected by the cleanliness and size of the capillary tube.
