Semiconductor capital spending refers to money spent or funds used by a semiconductor company in producing semiconductor ICs. Semiconductor capital spending includes the repair of semiconductor production equipment or the purchase of equipment.

Portable electronic devices such as smartphones and tablets become obsolete after a short time because of rapid launches of next-version models by vendors. On average, the replacement cycle is 8-12 months. In the past, the replacement period was much longer. Due to the reduction in the product replacement cycle time, the demand for memory devices for newly launched devices is expected to rise drastically, and this will
