Capsule suspensions (CS) are still one of the most advanced formulation types in global crop protection products and are a typical new generation formulation. When microencapsulated suspension (CS) is diluted with water in a spray tank, it will spontaneously disperse to form a suspension with a particle size range of 0.1 to 20 μ m. When sprayed, the diluted suspension can apply the active ingredients evenly and accurately to the crop, which is crucial for effective pest control. Microencapsulated suspensions (CS) can be used to achieve controlled and sustained release of active ingredients, while also reducing the toxicity and degradation of active ingredients.

The global Capsule Suspension (CS Preparation) market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
