Car aluminum bumpers are manufactured from aluminum alloys through extrusion, die-casting, or stamping. They are installed at the front and rear ends of vehicles to absorb and mitigate external impacts and protect front and rear vehicle components (such as the radiator, hood, and taillights). Compared to traditional steel bumpers, their core advantage lies in their significant weight reduction, which improves fuel economy or the range of electric vehicles. They also offer excellent energy absorption, corrosion resistance, and design flexibility. By 2025, the output of car aluminum bumpers will reach approximately 1.5 million sets, with an average global market price of approximately US$300 per set.

United States market for Car Aluminum Bumper is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Car Aluminum Bumper is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
