Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022. Growing demand for portable electronics such as smartphones, tablets, and GPS devices is one of the major drivers. Auxiliary power outlets are a common feature of contemporary vehicles due to the popularity of these gadgets and the consequent increase in customer demand for portable, reliable power. Another driver is the growing trend of consumers to spend more time in their cars, whether for long commutes or road trips. This has led to greater demand for in-car entertainment, communication and navigation systems, all of which require electricity. Auxiliary power outlets in vehicles allow drivers and passengers to stay connected and entertained on the road. The growing popularity of electric vehicles is one of the main obstacles. Although EVs often have multiple auxiliary power outlets so that users can charge their devices, as EVs become more popular and as conventional gasoline-powered vehicles become less popular, the need for auxiliary power outlets will eventually may be reduced. The growing acceptance of integrated entertainment systems in contemporary cars is another constraint. Many new cars today feature integrated entertainment systems that offer a variety of features, including built-in charging connections. Growing demand for electric vehicles (EVs) is one of the major opportunities. As more people switch to electric vehicles and the need

for in-vehicle charging alternatives increases, the need for auxiliary power outlets is likely to increase. Manufacturers can use this opportunity to add multiple auxiliary power outlets to electric vehicles, allowing users to charge electronic devices and vehicles at the same time.
