The Production is about 2,500 k units. A Car Brake Tester is a testing device designed to measure and evaluate the braking performance of a vehicle. It can assess brake efficiency, brake force distribution, braking balance, and the condition of the braking system under controlled conditions, ensuring the vehicle meets safety standards and regulatory requirements. Car brake testers are widely used in vehicle inspection stations, automotive manufacturing quality control, and research and educational institutions for brake system studies.

With the rapid development of the automotive industry and the continuous improvement of traffic safety standards, brake testers are expected to evolve towards high precision, intelligent automation, and integration. Future devices will be more integrated, capable of linking with vehicle diagnostic systems, data acquisition platforms, and smart traffic management systems to enable real-time brake performance monitoring and big data analysis. Meanwhile, portable and mobile brake testers will see wider use to meet flexible testing requirements. The rise of new energy vehicles and autonomous driving will also drive innovation in brake testing technologies, particularly for regenerative braking, energy recovery, and autonomous vehicle safety validation.
