The global Car Data Logging System market size is predicted to grow from US\$ 216 million in 2025 to US\$ 376 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2025, global Car Data Logging System production reached approximately 38,581 units, with an average global market price of around US\$ 5,728 per unit. Gross margin is about 43%. The cost is 3,265 USD per unit, the production is 50,000 units. Car Data Logging System is a system used to collect, store, and analyze vehicle performance data, typically through sensors and onboard interfaces such as CAN bus. It captures key parameters like engine performance, speed, temperature, and pressure, and is widely used in automotive testing, motorsports analysis, diagnostics, and fleet management to enhance performance optimization and safety monitoring.

Car Data Logging System is evolving toward higher sampling rates and multi-channel synchronized acquisition to meet the demands of autonomous driving and high-performance testing. It is increasingly integrated with autonomous driving systems, enabling the collection of multi-source data such as cameras, radar, and LiDAR for algorithm training and validation. With the advancement of cloud computing, real-time data upload to the cloud for remote monitoring, analysis, and OTA data transmission is becoming standard. At the same time, AI technologies are enhancing data analysis capabilities, allowing large-scale data modeling for fault prediction and performance optimization. Devices are also becoming more compact, energy-efficient, and highly integrated with in-vehicle electronic systems. Meanwhile, cybersecurity and data compliance requirements are strengthening, with greater emphasis on data encryption, privacy protection, and cross-border data management. Overall, application scenarios are expanding beyond R&D testing into areas such as fleet management, insurance,

and shared mobility.
