## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Car glazing systems help simplify the vehicle assembly process. The materials used for automotive glazing require excellent transparency, toughness, and need to be lightweight. If glass is utilized as an automotive glazing material, then in case of an accident the pieces and fragments of the glass should not get thrown over the people travelling in the car and injure them. The materials used in vehicles for glazing purpose have witnessed significant changes from the conventional glass used a few years back to different types of plastics and plastic blends being employed recently.
