The global Car NFC Door Handle Sensor market size is predicted to grow from US\$ 145 million in 2025 to US\$ 209 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

The automotive NFC door handle sensor uses the short-range wireless communication characteristics of NFC technology. When an NFC-enabled device (such as a smartphone) is brought close to the door handle, the NFC chip between the two will establish a communication connection. This connection enables the door handle to read the information in the device and perform identity authentication. Once the authentication is successful, the door will automatically unlock; similarly, the locking operation can also be achieved in a similar way.
