The global Car Plastic Tailgate market size is predicted to grow from US\$ 849 million in 2025 to US\$ 1700 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

In 2025, global Car Plastic Tailgate production reached approximately 5.3 million units, with a unit price of 163.6 USD per unit

The Car plastic tailgate refers to the rear door or hatch of a vehicle, typically found in SUVs, hatchbacks, and some trucks, that is made primarily or partially from plastic materials. The tailgate serves as an access point to the cargo area of the vehicle and can be opened and closed to load and unload items. A plastic tailgate is typically made from high-strength plastics such as reinforced thermoplastics, fiberglass-reinforced composites, or carbon fiber composites. These materials are chosen for their lightweight properties, which can help improve fuel efficiency and reduce overall vehicle weight.

The car plastic tailgate market is witnessing steady growth, primarily driven by the global automotive industry's shift towards lightweight and fuel-efficient vehicle designs. Plastic materials, such as reinforced thermoplastics and composites, offer significant advantages over traditional metal tailgates in terms of weight reduction, corrosion resistance, and design flexibility. The growing emphasis on sustainability and the need to comply with stringent emission regulations are encouraging automakers to adopt alternative materials. Additionally, the rise of electric vehicles (EVs), which benefit from reduced weight to improve battery performance, further boosts the demand for plastic tailgates. Advances in plastic molding technologies and increased investments in R&D by OEMs and tier-1 suppliers are also facilitating broader adoption across various vehicle segments.
