Automobile radiator aluminum foil is an aluminum alloy sheet material (usually 0.08~0.2mm thick) specially used for automobile radiator manufacturing. It has high thermal conductivity, corrosion resistance and brazing performance. Through special alloy formula (such as AA3003/AA4343) and surface treatment (hydrophilic coating), the heat exchange efficiency is optimized and it is widely used in engine radiators, intercoolers and new energy battery cooling systems. Its lightweight characteristics (more than 60% weight reduction compared to copper materials) directly help improve automobile energy efficiency.

United States market for Car Radiator Aluminum Foil is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
