Abstracts

The global Car-sharing Service market size is predicted to grow from US\$ 3443 million in 2025 to US\$ 5569 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Car-sharing Service is a mobility service that allows users to rent vehicles for short periods, often by the hour or minute, providing an alternative to personal car ownership. These services leverage digital platforms or mobile apps for vehicle booking, unlocking, and payment, enabling flexible and convenient access to vehicles in urban environments.

The car-sharing industry is currently transitioning from early-stage time-based rental services toward becoming a core component of urban mobility infrastructure. Driven by carbon neutrality policies and green transportation initiatives, electrification has become a central trend. Increasingly, shared fleets are shifting from internal combustion engine vehicles to electric vehicles, integrated with charging networks and energy management systems, improving both operational efficiency and sustainability.

Secondly, the industry is rapidly evolving toward platformization and data-driven operations. AI-based dispatching systems, dynamic pricing models, and real-time demand forecasting are being widely adopted to optimize vehicle distribution and utilization rates, improving overall profitability. At the same time, car-sharing services are becoming deeply integrated with public transportation systems, forming multimodal urban mobility networks that combine metro systems, shared cars, and last-mile connectivity solutions.

Thirdly, autonomous driving is expected to become a long-term transformative driver.

With the maturation of L4 and L5 technologies, future fleets may achieve driverless operations, including autonomous dispatching, charging, and maintenance, significantly reducing labor costs and maximizing fleet utilization. In addition, business models are expanding from simple time-based rentals to Mobility-as-a-Service (MaaS), subscription-based mobility, and corporate fleet management, positioning car-sharing as a fundamental component of smart urban transportation systems.
