The global CAR-T Cell Development Service market size is predicted to grow from US\$ 723 million in 2025 to US\$ 1066 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

CAR-T cell development service, i.e. Chimeric Antigen Receptor T-Cell Development Service, is a comprehensive service focusing on the research and development of CAR-T cell therapies, which, as an innovative genetically-modified cell therapy, has shown great potential and application prospects in the field of tumor immunotherapy. CAR-T (Chimeric Antigen Receptor T-Cell) cell therapy is a therapeutic method that uses genetic engineering technology to modify patients' own T lymphocytes so that they can precisely recognize and kill tumor cells. CAR-T (Chimeric Antigen Receptor T-Cell) cell therapy is a therapeutic method to modify the patient's own T-lymphocytes through genetic engineering technology, so that they can accurately recognize and kill tumor cells. The technology isolates, modifies and expands T cells and then infuses them back into the patient, thereby activating the patient's own immune system to fight cancer.

The CAR - T cell development service industry is currently showing several notable trends. In terms of market scale, it is growing rapidly. On the one hand, researchers are constantly optimizing the CAR - T cell structure, such as developing multi - target CAR - Ts to expand the coverage of tumor antigens and improve the clearance rate of tumor cells. On the other hand, efforts are being made to improve the safety of CAR - T cells, such as the design of safety - switch CAR - T cells and the introduction of inducible suicide genes. In terms of application scenarios, the exploration of solid - tumor indications and autoimmune diseases is the main trend. At present, more and more solid - tumor cell therapy projects have entered the clinical research stage, and the

exploration of CAR - T technology in the treatment of autoimmune diseases has also become increasingly active. In addition, the industry is also facing some challenges, such as the high cost of CAR - T cell therapy, the small number of patients who can afford it, and the limited application scope of existing products. In the future, with the continuous progress of technology and the improvement of the industrial chain, the CAR - T cell development service industry is expected to further expand its application scope, reduce costs, and bring more hope to patients.
