The global Car Tail Light Mold market size is predicted to grow from US\$ 3048 million in 2025 to US\$ 4686 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

A car tail light mold is a precision injection mold used for manufacturing automotive rear lighting components such as tail lamp housings, lens covers, light guides, and decorative trim parts. These molds are typically designed for high-transparency plastics such as PMMA and PC and require ultra-precision machining, mirror polishing, and thermal control systems to ensure optical clarity and dimensional accuracy. From a value chain perspective, upstream includes mold steel materials, CNC machining tools, polishing equipment, hot runner systems, and mold design software; midstream focuses on mold design, structural simulation, machining, assembly, trial production, and quality validation; downstream demand comes from automotive lighting manufacturers, OEM vehicle platforms, electric vehicle brands, and tier-one lighting suppliers. In 2025, the average selling price of car tail light molds is approximately US\$38,000 per unit, with global sales volume reaching around 82,000 units. The industry maintains a gross margin of 22%?35%, supported by technical barriers, customization complexity, and platform-based repeat orders.
