Carbenicillin is a bactericidal antibiotic belonging to the carboxypenicillin subgroup of the penicillins. It was discovered by scientists at Beecham and marketed as Pyopen. It has Gram-negative coverage which includes *Pseudomonas aeruginosa* but limited Gram-positive coverage. The carboxypenicillins are susceptible to degradation by beta-lactamase enzymes, although they are more resistant than ampicillin to degradation. Carbenicillin is also more stable at lower pH than ampicillin.

Carbenicillin Disodium Salt is a semi-synthetic penicillin antibiotic which interferes with final cell wall synthesis of susceptible bacteria. It is commonly used in place of ampicillin, reducing the occurrence of satellites. Used in plant transformation for the killing of *Agrobacterium* following co-cultivation of the bacteria with plant tissue.
