## Abstracts

The global Carbide Drilling Tool market size is predicted to grow from US\$ 1132 million in 2025 to US\$ 1629 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Carbide drills tools are tools used for drilling made of carbide as the main material. Carbide has the characteristics of high hardness, high wear resistance, high heat resistance and good toughness, which enables carbide drilling tools to perform drilling operations efficiently and accurately on various materials, such as steel, cast iron, titanium alloy, aluminum alloy, etc. The stepped head diameter changes in a step-like manner, and holes or stepped holes of different diameters can be processed in one drilling operation. It is often used in the processing of automobile engine cylinders, mechanical parts, etc. Multi-diameter drills have multiple cutting edge segments of different diameters, which can complete the processing of multiple hole diameters in one drilling process, improve processing efficiency and accuracy, and are suitable for the manufacturing fields of electronic circuit boards, molds, etc.

With the continuous improvement of machining accuracy requirements, carbide drill tools will develop in the direction of smaller diameter and higher precision. At the same time, integrated sensors and other intelligent components can realize real-time monitoring and diagnosis of drill tools, such as tool wear monitoring and cutting force monitoring, to improve machining efficiency and quality. In the field of automobile manufacturing, the drilling of key components such as engine cylinders, crankshafts, and gearboxes requires high precision, high wear resistance, and good cutting performance to improve the machining quality and production efficiency of automotive parts. When machining engine blades, turbine discs, fuselage structural parts, etc., carbide drill tools need to maintain stable performance under harsh working conditions such as high temperature and high speed to ensure the machining accuracy and reliability of aerospace parts. In the mining of coal mines, metal mines, etc., carbide drill

tools are used for drilling operations and need to have high strength, high impact resistance, and good wear resistance to adapt to complex geological conditions and high-intensity mining work.
