The global Carbon Arc Gouging Welding Machine market size is predicted to grow from US$ 404 million in 2025 to US$ 491 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

Carbon arc gouging welding machine is a piece of equipment used for metal processing, mainly used for gouging and drilling of metal workpieces?. It uses a high-temperature arc between the carbon rod and the workpiece to melt the metal, and blows away the slag through compressed air. It is mainly used for metal cutting, gouging, welding groove preparation and defect repair, and is suitable for thick plate processing (such as shipbuilding, heavy machinery). The carbon arc gouging welding machine industry is still indispensable in traditional heavy industry, but it faces dual challenges of technological iteration and environmental protection. Future growth points lie in intelligent transformation, penetration of emerging markets and innovation in segmented fields.

United States market for Carbon Arc Gouging Welding Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
