The global Carbon Black Composite Conductive Paste market size is predicted to grow from US$ 443 million in 2025 to US$ 742 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

In 2024, the global production of carbon black composite conductive paste will reach 17k tons, with an average selling price of US$25k per ton.Carbon black composite conductive pastes are a type of functional conductive material composed primarily of conductive carbon black as the primary conductive filler, combined with auxiliary materials such as polymer resins, solvents, and dispersants. The high surface area and conductive network structure of the carbon black particles create a continuous conductive path within the matrix, thereby imparting excellent conductivity and stability to the coating or film. Compared to pure carbon black conductive pastes, composite pastes often incorporate materials such as silver powder, graphene, and carbon nanotubes to enhance conductivity, reduce volume resistivity, and maintain flexibility, adhesion, and weather resistance.

United States market for Carbon Black Composite Conductive Paste is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Carbon Black Composite Conductive Paste is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
