Product Carbon Footprint (PCF) refers to measuring the total greenhouse gas emissions of a product at each stage of its life cycle, including raw material extraction, product production (or service provision), distribution, use, and final disposal/recycling stages. Greenhouse gases include carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFC), and perfluorocarbons (PFC). The calculation result of carbon footprint is the weighted sum of various greenhouse gas emissions during the product life cycle, expressed in carbon dioxide equivalent (CO₂eq), and the unit is kgCO₂e or gCO₂e.

Product Carbon Footprint Software is to measure the environmental impact of your products or services, taking into account all stages of a product's life cycle. It is a methodological framework that allows you to evaluate how your product design and activities affect the environment. With PCF software, you can create a complete analysis of the environmental footprint of your products in a very short time. PCF software provides you with the data that can facilitate your business decisions to develop more sustainable products or services.
