The global Carbon Capture Pressurization Equipment market size is predicted to grow from US\$ 1215 million in 2025 to US\$ 2264 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

Carbon Capture Pressurization Equipment refers to the range of mechanical systems used to increase and manage the pressure of carbon dioxide within CCUS processes, primarily including compressors for initial gas-phase compression and booster pumps for further pressurization during transport and injection. These systems enable captured CO₂ to be conditioned from low-pressure states into dense or supercritical phases suitable for pipeline transmission and geological storage or utilization. Designed to handle high pressures, varying phase conditions, and corrosive environments, such equipment plays a critical role in ensuring safe, efficient, and continuous operation across the capture, transport, and injection stages of the CCUS value chain. Within carbon capture pressurization equipment, booster pumps typically have an average price of around US\$1.7 million per unit with annual sales of about 150 units, while compressors reach 2,000-3,000 units annually with prices ranging from US\$0.3-0.4 million per unit, reflecting a structure of low-volume high-value versus high-volume mid-priced products.

The upstream of Carbon Capture Pressurization Equipment primarily consists of suppliers of specialized materials and core components, including high-grade steels and alloys, castings and forgings, seals, bearings, valves, motors and turbine drives, as well as control systems and precision machining and engineering services, while the downstream includes EPC contractors, system integrators, and end users across CCUS value chains such as power plants, industrial emitters, hydrogen production facilities, and oil and gas operators, where compressors and booster pumps are integrated into

CO₂ capture, transport, and injection systems to enable pressurization, pipeline transmission, and storage or enhanced oil recovery operations.

United States market for Carbon Capture Pressurization Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Carbon Capture Pressurization Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
