The global Carbon-coated SiO Anode Material market size is predicted to grow from US\$ 313 million in 2025 to US\$ 2137 million in 2032; it is expected to grow at a CAGR of 32.2% from 2026 to 2032.

Carbon-coated SiO Anode Material is a high-performance lithium-ion battery anode material engineered by applying a carbon coating on silicon oxide particles to improve electronic conductivity, buffer volume expansion, and enhance cycle stability and rate performance, making it suitable for advanced consumer electronics and electric vehicle battery systems requiring higher energy density. In 2025, production was 19,632 tons and the average price was USD 16,300 per ton. The industry's capacity utilization rate in 2025 was about 70% and the average gross margin was around 29%. Upstream, key raw materials include high purity metallurgical silicon powder and high purity silica, with representative suppliers such as Elkem, Ferroglobe, Evonik, Cabot and GCL Group providing essential inputs. The midstream segment focuses on silicon oxide particle formation, carbon coating deposition technology, surface interface engineering, nano-structuring control, slurry formulation optimization and electrode integration processes, which together determine conductivity efficiency, structural stability and electrochemical durability. Downstream, Carbon-coated SiO Anode Material is widely used in consumer electronics batteries and power batteries, with representative customers including Samsung Electronics, Contemporary Amperex Technology Co., Limited, BYD Company Limited, LG Energy Solution and Panasonic.

Carbon-coated SiO anode materials have established themselves as the pragmatic choice for current high-energy-density batteries, particularly in premium EVs and consumer electronics. The carbon shell effectively buffers volume expansion, securing superior cycle life compared to pure silicon. As the industry advances, continuous

breakthroughs in pre-lithiation technologies are steadily elevating initial efficiency, while manufacturing processes are becoming increasingly standardized and cost-effective. These ongoing optimizations ensure that carbon-coated SiO will continue to play a vital and enduring role in the evolution of next-generation energy storage solutions.
