## Abstracts

The global Carbon Conductive Additive market size is predicted to grow from US\$ 662 million in 2025 to US\$ 810 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

Carbon conductive additives, also known as conductive carbon additives or conductive carbon materials, are substances added to various materials to enhance their electrical conductivity. These additives are primarily composed of carbon in various forms, such as carbon black, carbon nanotubes, graphite, or graphene. When mixed with other materials, these carbon additives create a conductive pathway within the composite, allowing electricity to flow through.

Carbon conductive additives were in high demand in the electronics industry, particularly for the production of conductive inks, coatings, and films used in printed circuit boards (PCBs), flexible electronics, and touch screens.
