The global Carbon Dioxide Filter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A carbon dioxide (CO<sub>2</sub>) filter is a device used to remove carbon dioxide from air or airflow. Carbon dioxide filters are commonly used in various applications, including air purification, gas purification, and medical applications. Carbon dioxide filters typically consist of filter media designed to absorb carbon dioxide from air or airflow. The filter medium is usually made of activated carbon, which has a high surface area and can effectively adsorb carbon dioxide. In air purification applications, carbon dioxide filters are used to remove carbon dioxide from the air, which can improve indoor air quality and reduce the risk of health issues related to high levels of carbon dioxide. In gas purification applications, carbon dioxide filters are used to remove carbon dioxide from gases such as natural gas or hydrogen, which can improve gas purity and prevent damage to downstream equipment. In medical applications, carbon dioxide filters are used to remove carbon dioxide from the respiratory circuit of mechanical ventilators. This helps to prevent the accumulation of carbon dioxide in the patient's blood, leading to respiratory acidosis and other health issues.

United States market for Carbon Dioxide Filter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
