The global Carbon Dioxide Removal market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Carbon dioxide removal refers to the absorption or capture of carbon dioxide from the atmosphere and its long-term sequestration in soil, oceans, rock formations or products. This process helps reduce the amount of greenhouse gases in the atmosphere, thereby mitigating global climate change.

With the improvement of technology maturity, carbon dioxide removal technology is expected to achieve large-scale application in the future. This includes not only the implementation of large corporate and government projects, but also small projects involving individuals and families. Contribute to reducing the amount of carbon dioxide in the atmosphere by planting trees, improving soil management, and using chemical processes to remove carbon dioxide.
