These systems can help companies assess their carbon footprint and develop emission reduction plans to meet their carbon reduction goals. It typically includes features in the following areas:

Data collection: The system can automatically or manually collect relevant data, such as enterprise electricity consumption, vehicle fuel consumption, exhaust emissions generated during the production process, etc.

Data calculation: The system can use various calculation methods, such as international standards, regional standards, etc., to calculate the carbon emissions of enterprises.

Data visualization: The system can present data in the form of charts, reports, etc., so that enterprises can better understand their carbon emissions.

Risk assessment: The system can assess the impact of a company's carbon emissions on climate change and provide recommendations and guidance to reduce the company's environmental risks.
