## Abstracts

The global Carbon Emission Calculation Software market size is predicted to grow from US\$ 2800 million in 2025 to US\$ 5727 million in 2032; it is expected to grow at a CAGR of 10.9% from 2026 to 2032.

Carbon emission calculation software is a type of digital tool specifically designed to quantify the greenhouse gas emissions generated by an organization, product, project, or activity over a specific period.

The widespread adoption of carbon emissions calculation software is primarily driven by factors such as mandatory disclosure requirements under global climate regulations, rising corporate demand for ESG reporting, stricter low-carbon entry thresholds within supply chains, and the promotion of Science-Based Targets (SBTs). Particularly among small and medium-sized enterprises (SMEs) and organizations embarking on carbon management for the first time, the software's lightweight design, low cost, and ease of use have made it the preferred tool for rapidly meeting basic accounting and compliance requirements. As carbon data regulation globally shifts from voluntary to mandatory and as major brands increasingly articulate standardized requirements for supplier carbon information, market reliance on calculation tools that are accurate, transparent, and compliant with international standards continues to grow. In the future, carbon emissions calculation software will evolve toward greater precision, enhanced integration capabilities, and broader applicability. On one hand, reliability will be bolstered through the integration of real-time energy data, the expansion of Scope 3 databases, and the introduction of AI-driven verification mechanisms; on the other, the software will be progressively embedded into office systems, financial software, and procurement platforms, while extending into specialized applications such as product-level carbon footprint analysis and project-based carbon assessments, ultimately

evolving from a standalone calculation tool into an intelligent gateway supporting corporate green decision-making.
