The global Carbon Fiber Air Intake market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The advantage of the carbon fiber air intake pipe is its good thermal insulation performance, which can effectively prevent the high temperature of the engine compartment from affecting the intake air temperature. This not only improves the engine's power output, but also enhances its stability. Excessively high intake air temperatures can cause engine knocking, a phenomenon that has a serious impact on engine power output and durability.
