## Abstracts

The global Carbon Fiber Lithium Battery Roller market size is predicted to grow from US\$ 111 million in 2025 to US\$ 221 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2025, global shipments of carbon fiber lithium battery rollers are estimated at approximately 46,872 units, with an average selling price of around USD 2,430 per unit. Carbon fiber lithium battery rollers are functional roller components specifically designed for lithium battery manufacturing lines and are commonly used in critical processes such as coating, calendaring, slitting, and material conveying. Compared with conventional metal rollers, carbon fiber composite structures significantly reduce rotational inertia while enhancing dynamic stiffness, helping to improve tension control accuracy, roller surface stability, and electrode consistency under high-speed operation. These rollers are increasingly adopted as performance-driven substitutes as lithium battery equipment evolves toward higher throughput and yield requirements.

From a market perspective, carbon fiber lithium battery rollers are still in a targeted penetration phase, primarily adopted by leading lithium battery equipment lines and selected high-end battery manufacturers. While the overall market size remains smaller than that of general-purpose carbon fiber rollers, application maturity continues to improve in high-speed coating and high-precision calendaring processes. Demand is mainly driven by power and energy storage battery capacity expansion, the introduction of next-generation high-speed equipment, and performance upgrades of existing production lines. Market consensus holds that the value of these rollers lies in their contribution to electrode consistency, operational stability, and overall equipment throughput rather than unit component cost. As lithium battery manufacturing equipment continues to evolve toward higher line speeds, stricter tension control, and lower

vibration levels, carbon fiber lithium battery rollers are increasingly specified at the design stage. Overall market growth closely tracks capital expenditure cycles in the lithium battery industry and follows a steady, structurally driven expansion path.
