According to our LPI (LP Information) latest study, the global Carbon Fiber market size was valued at US\$ 1730.2 million in 2023. With growing demand in downstream market, the Carbon Fiber is forecast to a readjusted size of US\$ 1644.2 million by 2030 with a CAGR of -0.7% during review period.

The research report highlights the growth potential of the global Carbon Fiber market. Carbon Fiber are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Carbon Fiber. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Carbon Fiber market.

Carbon fiber is a long, thin strand of material about 0.0002-0.0004 in (0.005-0.010 mm) in diameter and composed mostly of carbon atoms. The carbon atoms are bonded together in microscopic crystals that are more or less aligned parallel to the long axis of the fiber. The crystal alignment makes the fiber incredibly strong for its size. Several thousand carbon fibers are twisted together to form a yarn, which may be used by itself or woven into a fabric. The yarn or fabric is combined with epoxy and wound or molded into shape to form various composite materials. Carbon fiber-reinforced composite materials are used to make aircraft carbon fiber compared to human hair and spacecraft parts, racing car bodies, golf club shafts, bicycle frames, fishing rods, automobile springs, sailboat masts, and many other components where light weight and high strength are needed.

The major manufacturers of carbon fiber are Toray, Zoltek (Toray), Mitsubishi Rayon,

Toho Tenax, SGL and so on. The top three accounted for about 45%.

North America is the main market, accounting for about 30%, followed by Europe at about 20%.
