## Abstracts

The global Carbon Fiber and Fabrics market size is predicted to grow from US$ 10050 million in 2025 to US$ 16700 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2024, global Carbon Fiber and Fabrics production reached 232,746 tons, with an average global market price of around US$ 37.0 per kg. Carbon fiber is a high-strength, high-modulus fiber material, typically about 5–10 ?m in diameter and composed predominantly of carbon atoms; carbon fiber fabric (or textile) refers to a sheet-like reinforcement formed by weaving, braiding or otherwise processing continuous carbon fibers or tows, offering exceptional strength-to-weight ratio, heat resistance, corrosion resistance and low thermal expansion.

Carbon fiber is a high-performance fibrous material made using polyacrylonitrile (PAN), pitch or pitch-based precursors and processed through spinning, stabilization (pre-oxidation), carbonization, graphitization and surface treatment. Its diameter is typically in the range of 5–10 μm, and it possesses exceptionally high specific strength, specific stiffness, fatigue resistance, corrosion resistance and thermal stability, making it the core reinforcement of advanced composite material systems. Carbon fiber fabric refers to a textile substrate produced by weaving, pultruding or non-woven techniques using carbon fiber tows or yarns, offering excellent formability and composite interface performance.

In terms of product structure and application structure, carbon fiber is commonly classified by performance grade into high-strength (HS), intermediate-modulus (IM), high-modulus (HM) and ultra-high-modulus (UHM) series. Fabric products include plain weave, twill, satin and non-woven mats. Applications are wide-ranging, covering

aerospace structural components, automotive lightweight parts, wind-turbine blades, civil-engineering reinforcement, electronic device housings and sporting goods. In recent years, with the acceleration of lightweighting and carbon-neutrality trends, its penetration into emerging scenarios such as new energy vehicles, rail transport and hydrogen storage/transport equipment has been steadily increasing.

Regarding cost structure and scale design, the main cost items for carbon fiber production include raw-material PAN (accounting for approximately 20% of total cost), manufacturing overhead (approximately 65%), and labor (approximately 15%). A typical carbon fiber production line (pre-cursor ? spinning ? pre?oxidation ? carbonization) achieves an annual output of about 500 to 1,000 t per line, while top-tier large-scale plants can reach 1,000 to 2,000 t per line. For related carbon fiber fabrics, single-line output varies from several tonnes to several tens of tonnes per year depending on weave form, design width and level of automation. The industry-wide average gross margin is around 25%–35%, and for manufacturers with self-supplied precursor, automated continuous equipment and high-end dedicated grades, gross margin can exceed 40%.

In terms of industry-chain structure and competitive pattern, upstream covers acrylonitrile monomer, solvents and additives; midstream comprises PAN precursor preparation, carbonization, graphitization and fabric weaving; downstream extends to carbon fiber fabrics, prepregs and composite products. The global carbon fiber industry is highly concentrated, with Japan, the U.S. and China being the predominant production regions. Notable companies include Toray Industries, Mitsubishi Chemical Holdings, Teijin Limited, Hexcel Corporation, SGL Carbon SE and China’s Zhongfu Shenying, Guangwei Composite Materials, etc. The high-end aerospace market remains led by Japanese and Western firms, while China continues its expansion in large-tow industrial grade and mid-end applications.

Looking ahead, the carbon fiber and fabric industry will continue evolving toward higher performance, lower cost, greener production and intelligent manufacturing. Key technologies will include low-energy pre-oxidation, short-cycle carbonization, solvent-free polymerization, new eco-friendly precursors (such as bio-based PAN) and recycling systems. Growth in downstream demand will be driven by aerospace, wind power, hydrogen storage, rail transport and new-energy vehicle structural components. The global market pattern is expected to shift from a few-player monopoly toward regional multipolarity, and technical barriers, equipment integration capability and chain-wide integration will become pivotal competitive factors.

# Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Carbon Fiber and Fabrics Industry Forecast” looks at past sales and reviews total world Carbon Fiber and Fabrics sales in 2025, providing a comprehensive analysis by region and market sector of projected Carbon Fiber and Fabrics sales for 2026 through 2032. With Carbon Fiber and Fabrics sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Carbon Fiber and Fabrics industry.

This Insight Report provides a comprehensive analysis of the global Carbon Fiber and Fabrics landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Carbon Fiber and Fabrics portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Carbon Fiber and Fabrics market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Carbon Fiber and Fabrics and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Carbon Fiber and Fabrics.

This report presents a comprehensive overview, market shares, and growth opportunities of Carbon Fiber and Fabrics market by product type, application, key manufacturers and key regions and countries.

## Key Questions Addressed in this Report

What is the 10-year outlook for the global Carbon Fiber and Fabrics market?

What factors are driving Carbon Fiber and Fabrics market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do Carbon Fiber and Fabrics market opportunities vary by end market size?

How does Carbon Fiber and Fabrics break out by Type, by Application?
