Carbon fiber prepreg is an intermediate product between raw materials and final composite products in the carbon fiber industry. Carbon fiber prepreg is a composite material made of reinforcements, such as carbon fiber yarn, resin matrix, release paper and other materials, which are processed by coating, hot pressing, cooling, film covering, coiling and other processes. It has high strength and low density: the strength of carbon fiber prepreg can reach 6-12 times that of steel, and the density is only 1/4 of steel; good plasticity: it can be made into any shape according to the shape of the mold, easy to form and easy to process; and Corrosion, long life and other performance characteristics. Therefore, it is widely used in sports and leisure, aerospace, rail transit, shipbuilding, wind power, military and other industries.
