The global Carbon Fiber Raw Paper market size is predicted to grow from US\$ 307 million in 2025 to US\$ 593 million in 2032; it is expected to grow at a CAGR of 9.8% from 2026 to 2032.

Carbon fiber raw paper is a porous conductive paper-based substrate mainly produced from chopped polyacrylonitrile-based carbon fibers, primarily through wet-laid processing and, to a lesser extent, through dry-laid forming routes. It is an important precursor for carbon paper, gas diffusion layers, and related conductive paper-based materials used in fuel cells and selected electrolyzer applications. The mainstream industrial route is still based on wet-laid processing, with the material first formed into a base paper layer and then further processed through impregnation, carbonization, graphitization, and surface treatment before entering downstream carbon paper or gas diffusion layer applications. Upstream raw materials mainly include PAN-based chopped carbon fibers, phenolic or other impregnation resins, dispersants, binders, and related auxiliaries. Downstream customers mainly include gas diffusion layer manufacturers, membrane electrode assembly producers, fuel cell stack companies, electrolyzer material suppliers, and research and pilot-scale users. The global production capacity of carbon fiber raw paper in 2025 is estimated at about 23.0 million square meters, with sales of about 15.864 million square meters, an average global price of about USD 19.80 per square meter, and gross margins of about 24%?36%. Overall, the market remains dominated by a limited number of manufacturers that control wet-laid paper formation and the downstream integration of carbonization and graphitization. Customer qualification cycles are relatively long, and demand is mainly concentrated in hydrogen fuel cells, PEM water electrolysis, and selected high-end electrochemical applications such as redox flow batteries.

United States market for Carbon Fiber Raw Paper is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
