The global Carbon Fiber-reinforced Plastic Strips market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Carbon fiber reinforced plastic strips are high-performance reinforcement materials made of carbon fiber and resin matrix. This material combines the high strength and high rigidity of carbon fiber with the light weight and corrosion resistance of plastic, and is widely used in applications that require light weight and high strength. With the development of science and technology, CFRP strips are moving towards higher performance and wider application areas. Future research may focus on improving the damage tolerance of CFRP strips, reducing costs, and improving production efficiency. At the same time, with the improvement of environmental awareness, bio-based or recyclable CFRP strips will also become a research hotspot.

United States market for Carbon Fiber-reinforced Plastic Strips is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
