The global Carbon Fiber Reinforced Plastics Propeller market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Carbon Fiber Reinforced Plastics Propeller is a propulsion device made of carbon fiber reinforced plastic. Carbon fiber is a very light yet very strong material, so it is widely used in aerospace, marine, and other applications that require lightweight, high-strength materials. After combining carbon fiber with appropriate plastic resins to make composite materials, lightweight, strong, and well-rigid parts can be produced. CFRP propellers have higher specific strength (material strength per unit mass) than traditional metal propellers, and are more Good fatigue characteristics and corrosion resistance. Additionally, by leveraging the strength of CFRP, thinner propellers with smaller blade areas can be produced, potentially increasing propeller efficiency.

United States market for Carbon Fiber Reinforced Plastics Propeller is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
