The global Carbon Fibre Drone Fuselage market size is predicted to grow from US\$ 345 million in 2025 to US\$ 801 million in 2031; it is expected to grow at a CAGR of 15.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The demand for lightweight drones has prompted the continuous upgrading of their body materials. After lightweight metal materials such as aluminum alloys and titanium alloys, carbon fiber composite materials have become the 'main' material of drones. UAV structural design and manufacturing technology with carbon fiber composite materials as the core has become a key technology for the development of drones. The carbon fiber drone case is an external structural component of a drone with carbon fiber composite materials (such as carbon fiber reinforced resin-based composite materials, CFRP) as the main body. Its core characteristics include lightweight and high strength (more than 5 times the specific strength is steel), corrosion resistance, fatigue resistance and strong designability. It can optimize the structure through integrated molding process to improve the flight efficiency, load capacity and battery life of the drone.

United States market for Carbon Fibre Drone Fuselage is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
