A carbon filter cartridge is a type of filtration cartridge that incorporates activated carbon as the filtration medium. It is used to remove impurities, odors, and chemicals from air or water by adsorption. The cartridge consists of a housing typically made of plastic or metal that contains a granular or powdered activated carbon bed. As the air or water passes through the cartridge, the activated carbon traps and adsorbs contaminants, such as chlorine, volatile organic compounds (VOCs), and unpleasant odors. Carbon filter cartridges are popular for their effectiveness in improving air and water quality, particularly in applications such as air purifiers, water filters, and HVAC systems.

The industry trend for carbon filter cartridges is witnessing significant growth due to increasing concerns about indoor and environmental air and water quality. With growing
