According to this study, the global Carbon Integral market size will reach US\$ million by 2029.

As the world places greater emphasis on reducing greenhouse 4 gas emissions and moving towards a low-carbon economy, the demand for carbon credits and offsets is expected to increase. As more countries and regions implement carbon pricing methods, the global carbon trading industry is expected to grow. The pattern of supply and demand for carbon allowances or credits can be affected by variables such as changes in the regulatory framework, fluctuations in the economic environment and policy uncertainty. Moreover, market stability and large fluctuations in rabbit-avoidance prices are essential for the long-term effectiveness of carbon trading.
