According to our (LP Info Research) latest study, the global Carbon Nanotube Adhesive Sheet market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Carbon Nanotube Adhesive Sheet is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Carbon Nanotube Adhesive Sheet market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Carbon Nanotube Adhesive Sheet are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Carbon Nanotube Adhesive Sheet. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Carbon Nanotube Adhesive Sheet market.

Carbon nanotube bonded sheets, referring to their thermal conductivity of up to 100 W/mK, carbon nanotubes have high thermal conductivity and are promising candidates for heat dissipation from heat sources such as semiconductor devices. However, their fragile nature makes them impractical for many applications. To address this problem, a technique has been commercially developed to laminate vertically aligned carbon nanotubes while maintaining their original properties of high thermal conductivity and flexibility, as well as a technique to bond them with sufficient adhesive strength. This technology facilitates the cutting and handling of carbon nanotube sheets, allowing them

to be used as heat dissipation materials, such as automotive power modules for electric vehicles(EVs).
