## Abstracts

The global Carbon Nanotube Coating market size is predicted to grow from US\$ 141 million in 2025 to US\$ 194 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Carbon nanotubes are introduced as efficient fillers that have been used in different coating systems due to their unique properties such as ultrahigh modulus and strength, anisotropic electrical conductivity, large surface area, high aspect ratio, and unique thermal properties. These outstanding properties have made CNTs to be used in coatings as a functional filler to improve the final properties and enhance the performance of the fabricated coatings. CNT's have been used in nanocomposite coatings to improve general properties such as mechanical, optical, electrical, and thermal. Additionally, they also have been used in fabricating corrosion-resistance coatings, coatings for biomedical applications, energy storage, and sensors applications.
