The report requires updating with new data and is sent in 48 hours after order is placed.

Carbon nanotube NMP dispersant is a dispersant suitable for dispersing carbon nanotubes in NMP solvents. Carbon nanotubes (CNTs) are highly hydrophilic and have extremely high surface energy. They are difficult to effectively disperse in conventional solvents and are prone to agglomeration. Dispersants are required to help stabilize the carbon nanotube dispersion system. NMP has high polarity and solubility, and can interact with the surface of carbon nanotubes to form a molecular layer, thereby effectively dispersing carbon nanotubes. At the same time, NMP also has lower vapor pressure and better thermal stability, making it more stable and reliable during the dispersion process.

The global Carbon Nanotube NMP Dispersant market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
