The global Carbon Nanotube Powder market size is predicted to grow from US\$ 895 million in 2025 to US\$ 3660 million in 2032; it is expected to grow at a CAGR of 25.9% from 2026 to 2032.

Carbon nanotube powder is a dry powder material primarily composed of single-walled or multi-walled carbon nanotubes (CNTs). It possesses nanoscale tube diameters, high aspect ratios, and large specific surface areas, along with excellent electrical, thermal, and mechanical properties. It can be used as a conductive filler, reinforcing material, or functional additive in polymer, metal, and ceramic matrices to improve the materials' electrical conductivity, thermal conductivity, and mechanical properties. Carbon nanotube powder itself does not contain solvents or dispersion media and can be prepared into liquid slurries using dispersants or solvent systems for processing. In 2025, global shipments of carbon nanotube powder were approximately 6,150 tons, with an average price of approximately US\$148,800 per ton and a gross profit margin of 40%-50%.

The global market for carbon nanotube (CNT) powder is experiencing rapid growth. The primary market is lithium-ion batteries, where CNT powder as a conductive additive enhances electron transport within electrodes and improves battery performance. Multi-walled CNT powders, due to their lower cost and ease of dispersion, dominate industrial-scale applications. Single-walled CNT powders, as high-end materials, see growing demand in high-rate automotive batteries, energy storage, and flexible electronics, driving overall market value growth. With the rapid expansion of electric vehicles, energy storage systems, printed electronics, and functional composites, the global CNT powder market is expected to continue expanding.
